ASU Tempe Campus, Helmick Center (HLMK) 559

## Insurance in the Age of the Climate Crisis: How the Insurance Industry can drive Climate Adaptation

---

Homeowners Insurance has been in the media spotlight of late, and justifiably so—premiums are on the rise across the country. But although the homeowners insurance crisis is a widespread phenomenon, its causes are complex, multilayered, and highly geography-dependent. In this lecture, Dr. Weimer will discuss the origins of the insurance crisis, with a particular focus on climate change, actuarial methodologies, and how the insurance industry can catalyze the adoption of new climate technology.

**Bio:** Dr. Louis Weimer is a Data Scientist with a decade of experience in the insurance industry. From 2023 to 2024 he was the Director of Data Science for Kin Insurance, a high growth insurtech startup. He holds a Ph.D. in Political Science from UC San Diego.
